

SCREEN™ **Duo**

GRAPES

Stress Protection - Inside & Out

Season Long Protection

Reduced leaf stress
Reduced berry shrivel
Increased bunch per vine
Increased bunch size
Increased bunch weight

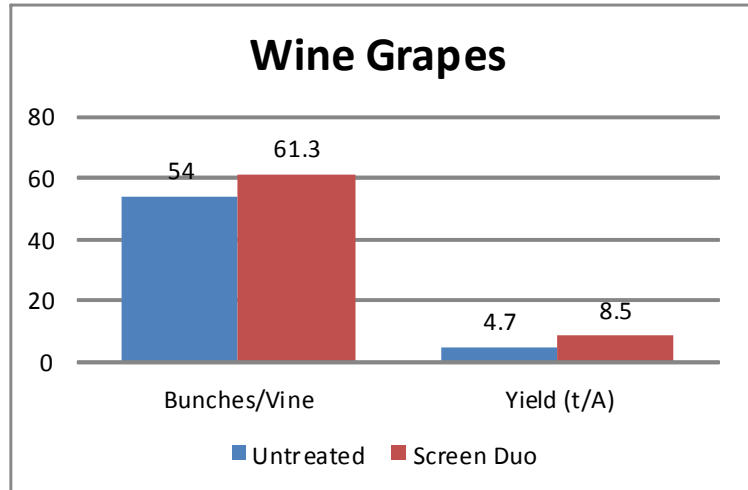

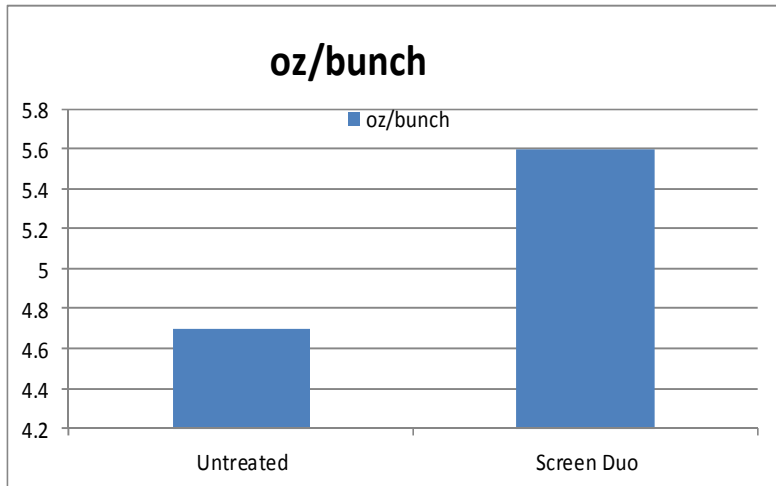

Block out sunburn Lock in yield

Increased marketable yield
Higher pack outs
Reduced grading costs
Increased profit

Reduced stress = Reduced water use

Protected plants less water for cooling
More water is used for photosynthesis

Data from trials conducted in 2010

Season long stress management works best

- Reduced stress during berry development = *reduced berry shrinkage and increased bunch weight*
- Season-long reduction in heat and light stress = *increased yield*

Screen Duo has no negative impact on wine quality parameters

Use Directions

1. Wine Grapes

Season Long Program (Preferred)

Apply a minimum of 10lbs/100 gals of water in sufficient volume to provide a uniform film over foliage. Begin applications immediately after flowering (cap fall) and continue at 14-21 day intervals or as necessary to maintain a uniform coverage.

Sunburn Management Only

Make initial application of 20lbs/100 gals of water with sufficient volume to provide a uniform film over foliage and fruit. Make additional applications of a minimum of 10lbs/100 gals of water every 10-14 days, or as needed. Begin applications 2-3 weeks prior to veraison.

2. Table Grapes

Apply 20lbs/100 gals of water with sufficient volume to provide a uniform film over foliage. Begin applications once the leaves are fully expanded and continue with a minimum of 10lbs/100 gals of water every 14 days, or as needed, until flowering. Aim spray to cover foliage on the top of the vines. **DO NOT APPLY SCREEN DUO DIRECTLY TO THE FRUIT.**
